

SAFETY & HEALTH

RSBians cherish their association for an enduring tenure, reflecting firm bonding within the organization. RSB units in various areas focus on varied mosaic of activities related to their work force. These include the Group's focus on workers' health and safety, response in emergencies and assistance to them.

Safety & Health.

Work place safety standards are adhered to global standards (OHSAS 18001 – 2007). Personal protective equipment are provided to all, irrespective of rank and file, and extended to contractors' workmen. Adherence to safety and health standards are monitored through internal audits at periodic intervals by Cross Functional Teams (CFT) to ensure "nil" deviation. Workers provided by contractors also undertake identical safety norms. Supervisors ensure that workers adhere to safety regulations, mock drills and emergency preparedness response. Training on first aid/fire fighting is organized periodically for employees, including contractors' workmen. Incidents go through strict analysis to ensure corrective and preventive measures are put in place to avoid recurrence. Incidents on RSBians are treated in excellent/best medical facility available at the locations so that joy of working with RSB endures.
